BEFORE YOU TRADE

The Pre-Session Checklist

Do this before every session. Same order, every time.

- [ ] **Mark your levels**
  The NY, overnight and weekly profiles for the session you trade (table below). Fixed range volume profile, Row Size 1000, Value Area 70%.

- [ ] **Draw the developing profile, Extend Right on**
  From 18:00 ET for Asia and London, or 09:30 ET for NY. Extend Right carries the dVAH, dPOC and dVAL across to where price is trading now.

- [ ] **VWAP and its bands set**
  Anchor Period: Session. Bands at 1, 2 and 3 standard deviations.

- [ ] **ATR on the chart**
  Length 60, RMA smoothing. You'll read it for every stop.

SESSION	START TRADING	LEVELS TO MARK	DEVELOPING PROFILE
Asia	08:00 SGT, all year	Previous NY · previous overnight · previous week	From 18:00 ET
London	15:00 SGT (UK summer) · 16:00 SGT (UK winter)	Previous NY · previous overnight · previous week	From 18:00 ET
NY	10:00 ET	Previous NY · today's overnight · previous week	From 09:30 ET

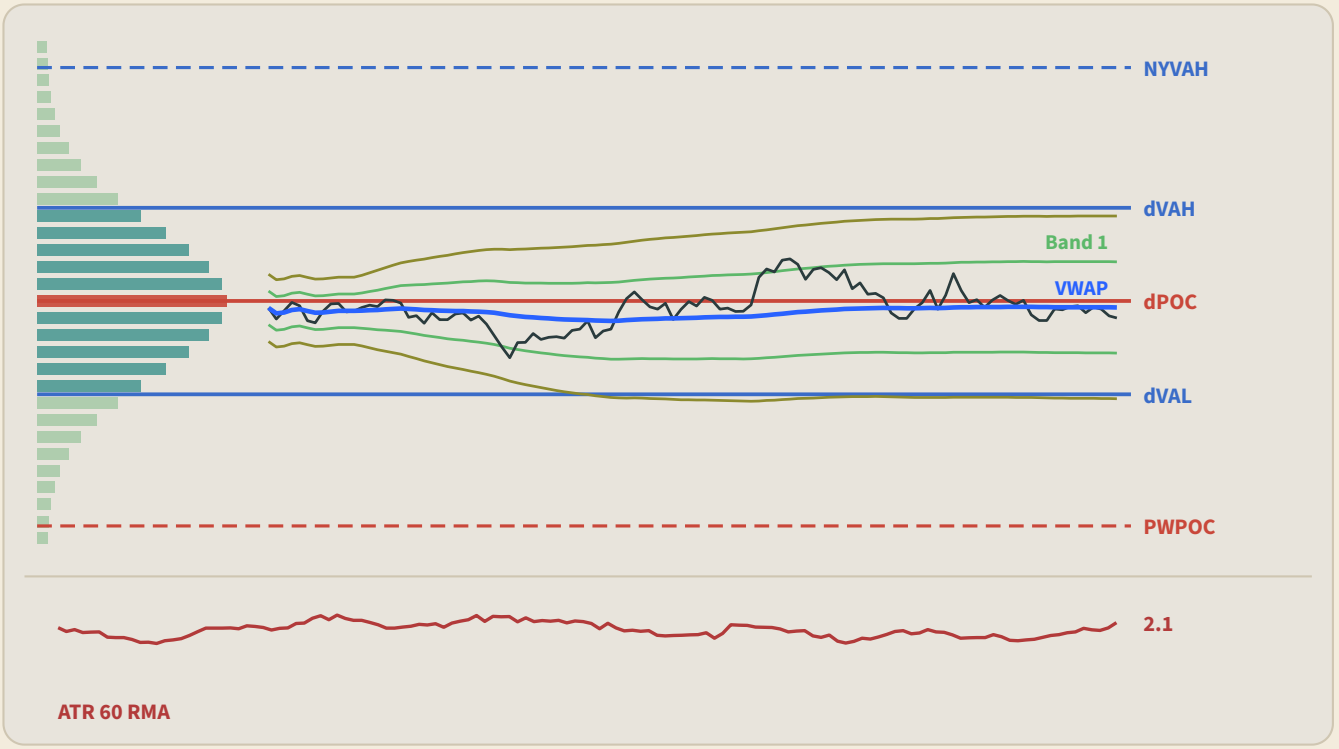

KEY TAKEAWAY

Four boxes ticked and your chart is ready. Don't take a trade until it is.

BEFORE YOU TRADE

Your Chart, Ready

What it should look like once the checklist is done.

- **Pre-existing levels.** NY, overnight and weekly VAH, POC and VAL. Value the market already agreed on.
- **VWAP and bands.** Today's average price and how stretched price is from it. Confluence only.
- **Developing profile.** Today's dVAH, dPOC and dVAL, extended right so they follow price.
- **ATR.** The number you read for your stop. ATR × 2 points.

WHY EXTEND RIGHT MATTERS

Without it, the developing profile's lines stop at the edge of the histogram. With it on, the dVAH, dPOC and dVAL run across the chart, so you can see the moment price reaches them. Only turn it on for the developing profile. Your pre-existing profiles stay on their own range.
